Serwent Denmark signs agreement to acquire Nymann Kloak & Miljøservice A/S

Serwent Group, a UIM player with focus on pipe and emptyin services, today announces an agreement to acquire Nymann Kloak & Miljøservice A/S. Nymann is a well-established provider of sludge emptying, dry suction, high-pressure flushing, pipe inspection, drain cleaning and hydrodemolition.

The acquisition expands Serwent Denmark's geographic presence in the Danish market and adds capacity and services that complement what Serwent already offers.

"Once the formal handover is complete and the transaction has been approved by the Danish competition authorities, we look forward to welcoming everyone at Nymann into the Serwent family. We are excited to get to know our new colleagues and to build something strong together. This acquisition allows us to offer even more complete solutions to our customers in Denmark," says Aleksander Holter, CEO of Serwent Group.

The acquisition is part of Serwent's long-term goal of becoming the most complete UIM operator in the Nordic region, with local presence, strong expertise and sustainable solutions at the core of everything they do.
